

Competency Questions (CQs)

This is a list of the Competency Questions (CQs) used to structure and validate the ClimOO Ontology, organized according to the scoping themes:

Types and characteristics of plastics and microplastics

- What are the main types of plastics and plastic debris? And related components?
- What are the main characteristics of plastics and plastic debris?
- What are the polymers that compose each type of plastic?
- What distinguishes a plastic object from a plastic debris?

Origins of plastic particles

- What kinds of processes supply plastics? How is plastic generated?
- What are the processes leading/contributing to the formation of microplastics and other debris, especially in agriculture?

Products of the corruption of plastic items; where they go - Extent of plastics and microplastics in agriculture, today

- What are the sources of microplastic debris, especially in agriculture?
- What are the main usages of plastic in agriculture that lead to microplastic production?
- What are the sinks of plastics and microplastics, especially in agriculture?
- Which agricultural activities require the use of plastic objects?

Threats of plastic pollution in agriculture related to climate - Possible alternative to plastics

- How does climate change contribute to plastic pollution?
- How does plastic pollution contribute to climate change?
- What are the processes that can contribute to reducing plastic pollution, especially in agriculture?
- What of those processes do not exacerbate climate change?
- What of those processes do also contribute to mitigating/reducing climate change?
